

POLYTUBES LP

LINER PRODUCTS

**PROVIDES RESISTANCE TO INTERNAL ABRASION AND
CORROSION**

ABOUT OUR PRODUCTS

- Polytubes HDPE liners are installed within a host pipe. This provides the host pipe resistance to internal abrasion and corrosion.
- Polytubes' ability to make the liner with a thin wall and with HDPE's strong characteristics the allows for the liner to be compressed so the outside diameter can be reduced during installation.
- Once the liner is installed in the host pipe, the liner is relaxed, and it returns to its original outside diameter forming an extremely tight fit.
- With the correct sized liner and the correct installation process, the HDPE liner is practically fastened in place.
